

IN THE CLAIMS:

1. (Currently Amended) A communication~~Communication~~ device ~~with~~comprising casing parts enclosing a microphone and a receiver and suspension points therefore in the casing, further including a sound canal from the receiver to ~~the~~an ear of a user, and wherein at least one of the casing parts ~~are~~is shaped from an injection moulded fibre-reinforced polymer compound which has a fibre content between 30% and 75% by weight and an E-module which is higher than 13 MPa.

2. (Currently Amended) The communication~~Communication~~ device as claimed in claim 1, ~~whereby~~wherein the fibre content is between 40% and 60% by weight.

3. (Currently Amended) The communication~~Communication~~ device as claimed in claim 1, ~~whereby~~wherein the reinforced polymer is ~~a~~a ~~polyamide~~polyarylamide-based compound and the fibre-reinforcement comprises glass fibres.

4. (Currently Amended) The communication~~Communication~~ device as claimed in claim 1, wherein the reinforced polymer is a polyamide-based compound.

5. (Cancel)

6. (Currently Amended) The communication~~Communication~~ device as claimed in claim 1, wherein the reinforced polymer compound has an BE-module which is higher than 15 MPa.

7. (Currently Amended) The communication~~Communication~~ device as claimed in claim 1, wherein the reinforced polymer compound has an BE-module which is higher than 18 ~~Mpa~~MPa.

8. (Currently Amended) The communication~~Communication~~ device as claimed in claim 1, including a receiver enclosure which has wall parts forming part of the casing which in cooperation with detachable wall parts form the enclosure in an air tight manner for sound isolation of the receiver.

9. (Currently Amended) The communication~~Communication~~ device as claimed in claim 8, wherein at least shell and wall parts forming the receiver enclosure are shaped from an injection moulded fibre-reinforced polymer.

10. (Currently Amended) The communication~~Communication~~ device as claimed in claim 1, wherein the casing comprises a first and a second part which are tightly joined along respective edge lines whereby a flexible packing or gasket material is provided in the edge line between the two casing parts.
